

# Sphynx Launchpad

With this document we will go through all the benefits of using the Sphynx Launchpad, as well as a small comparison to show the differences and advantages that Sphynx has over other platforms.

#### The Features

Sphynx offers a lot of powerful features. It is important for us to mention these so that every user can benefit the most of our solid Launchpad. It is essential to have a wide variety of tools in order to be competitive, but sometimes it can be a little overwhelming. You will find a list below with the current features and benefits so that it will be easier to understand what we offer.

#### **Tier System**

Projects that are using Sphynx Swap will be able to make use of the tier system. This tier system is made to give people an indication of how safe the project is. The tier system is based on the following information:

### Gold Tier:

- 1. Certik Audit
- 2. Doxxed Team
- 3. Real utility behind the token
- 4. Third Party KYC

If for example, the token does not meet one of those criteria, they will be placed in a lower tier i.e. silver tier or bronze tier.

#### Silver Tier:

2 or 3 out of 4 from the requirements above

#### Bronze Tier:

1 out of 4 from the requirements above

## Other Features of the Launchpad

#### Presale Directory:

We offer a simple yet powerful tool. We give the ability to our investors to search the projects by tier. This way the investors can decide which token they would like to invest in and quickly see the amount of financial risk is involved in investing their money in that particular token.

## Lockers:

Locker utility allows the token creators to lock a part of their tokens and liquidity as well as enable vesting in various kind of ways. This way Sphynx Swap creates a simple yet effective tool for token creators to use and provide extra security measures for the investors.

## Fairlaunch:

With our Fairlaunch pad we give developers access to enable the use of a Fairlaunch. This way the investors all pay an equal amount of money to buy the token. There are no private or presales.

## Fairlaunch Directory:

Yet another, yet simple tool that is essential for the safety of the investors, we have a directory where investors can see the projects that have launched through the Fairlaunch method.

## Comparison

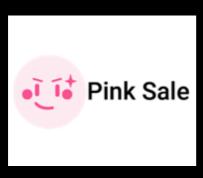

We are happy to compare our Sphynx Launchpad with other known platforms, as we believe that Sphynx Swap is superior in all ways.

## Comparison to DX Sale:

The differences are very visible. We offer a clean interface UI that is easy to use and we have all the essential information in one overview. With DX sale accepts every project and shows no information about the token, whereas Sphynx Swap offers the tier system to evaluate tokens and inform the investors how safe the token is to invest in.

## Comparison to Pinksale:

The big difference between Pinksale and Sphynx Swap is transparency. Sphynx takes pride on transparency and what the purpose token allocations is for.

Prices and fees are much lower and will consistently stay this way.

#### **Advantages**

## Liquidity lock for 3 months:

One of the main advantages is having the liquidity pool locked of a minimum of 3 months, this way we avoid projects that are willing to list for a quick "rug pull" and we minimize the risk for financial loss to the investors. This is one of the most important safety measures we applied for any token willing to list on the Sphynx Launchpad. We embrace new investors and provide one of the most safest platforms to buy any presale token on.

#### Token Lock:

To be able to list a token of Sphynx Swap the token creators are also forced to lock a certain part of their tokens, to minimize the risk of a big market dump or any other harm that can be done without locking the tokens. The tokens and liquidity lock will both provide a more stable and solid token so that investors have more trust and confidence in buying the token. This will work in the benefit of the token holders as the investors, as there is more transparency and clarity.

#### Fairlaunch:

The tokens listed on our launchpad will be advised to do a Fairlaunch. This means there has to be no private sales, no ICO and no pre-mining. This way all the investors start at equal footing and will avoid massive sell off caused by for example private sell investors that have a huge advantage over public sale.

## **Advantages**

## List of Our Fees:

- 0.10 BNB Fee
- 1.75% Token
- 1.75% Raised BNB
- 0.10 BNB goes to swap fee rewards
- 0.50% of the 1.75% goes to swap fee rewards
- 0.50% of the 1.75% goes towards buy back/liquidity pool
